EX-Series

Our collection...

FLIR Ex-Series cameras are point-and-shoot thermal imaging cameras that give you access to a new dimension. A FLIR Ex-Series camera is an affordable replacement for a spot pyrometer. It provides a thermal image with temperature information on every pixel. The combined image storage of the new MSX®, thermal and visual formats make the cameras incomparably easy to use.

Explaining

how thermal imaging works

Image of a cup of coffee. The image doesn't show if the coffee is hot or cold.

Thermal image of a cup of coffee showing that the coffee is 45.3 °C

FLIR thermal imaging cameras:

- Are as easy to use as a digital camera
- Identify and locate the problem
- Measure temperatures
- Help you find faults before real problems occur
- Save you valuable time and money

Infrared thermometers versus thermal imaging cameras

Infrared (IR) thermometers are reliable and very useful for single-spot temperature readings, but when scanning large areas, it's easy to miss critical parts. A thermal imaging camera will instantly reveal possible problem areas whether you're doing electrical, mechanical, building or property management inspections.

A thermal imaging camera is the one tool that really lets you SEE it all.

IR thermometers measure temperature one spot at a time.

FLIR Ex-Series can measure 4,800 temperatures at a time.

Exclusive

MSX® - patented FLIR feature

The unique MSX® feature is included in every FLIR Ex-Series camera. It ensures clear, crisp thermal images.

Thermal image without MSX®

Thermal image with MSX®

Although glass is not transparent for infrared radiation the thermal image with MSX® clearly shows the hands of the clock behind the glass. This is only possible thanks to MSX® technology that overlays a part of the visual image over the thermal image. The result: thermal images on which the smallest details can be seen.

Thermal image with MSX®

FLIR patented MSX® ensures that even the traffic signs and the graffiti on the wall can be read on the thermal image.
